

QUICK LESSON ON DRAWING FIGURES

① Draw your favorite stick figure

② Observe that its major problem is only that it is a quadrupole so add arms & legs

③ The next big improvement comes if we add shoulders & hips

④ Even fancier: Add hands, feet and joints

⑤ With shoulders hips and feet, you can now easily draw figures in perspective

→ to vanishing point

⑥ Nice to note proportions

⑧ Note head isn't lolly-pop skewed on a stick

⑨ In fact head is oblong...

⑩ and from the side the spine comes in at almost 45°

⑦ Time to attend to posture!

side view not so great

spine is really an S curve

⑪ Note eyes and ears are ~~not~~ way down the head

⑫ and are best located on an ellipse...
